

ID	Name of the company	Job Description	Requirements	Preferred departments of the candidate	Internship type	Duration of Internship	No. of interns	Stipend
1	Atomionics	<p>Atomionics is a Singapore based VC-backed startup building quantum sensors for Navigation and Resource Exploration. We measure gravity, acceleration, and rotation 1000x better than the state of the art. Atomionics sensors can build a complete map of the underground, thus help pinpoint underground structures like tunnels and bunkers, and predict earthquakes, provide precise navigation, and build a universal positioning system that works everywhere – underground, underwater, and even in space. We have deep expertise in bringing complex technologies from a lab environment to the dynamic real world.</p> <p>At Atomionics we like to cultivate a casual and friendly environment. We are a small focused group in a high-energy environment. The core of what we are building is called cold atom interferometry, where we cool down atoms to microkelvin temperatures by shooting lasers at them. Our team has over 30 years of combined relevant research experience. This allows us to measure the forces acting on them precisely. Due to the complexity of our work, our employees get to interact with other interdisciplinary domains such as Mechanical Engineering, Physics, and Software Engineering. Our company likes to treat our work as a “gym for our minds”.</p> <p>In addition, we are backed by some fantastic investors from the private and public sectors, such as Wavemaker, SGInnovate, Capvista, 500startups, and other prominent angels.</p>	<p>About you</p> <ul style="list-style-type: none"> • An absolutely driven individual with creative problem solving skills, analytical mind, and persistence, ideally, demonstrated • Able to program and debug in C, C++ or Python, with some experience in programming embedded systems • Well-versed in basic electronics: knowledge of fundamental circuits and their operation • Experience with PCB design (and familiarity with at least one EDA software), assembly and testing of analog, digital and mixed signal circuits <p>Even better if you have</p> <ul style="list-style-type: none"> • Worked in a technical student team, or an early stage company environment • Worked on personal hobby projects (and can brag about them!) • We don't care for degrees, but if you have studied Electrical/Computer/Mechatronics/Systems Engineering, or a related field, that'll be delightful. Also open to candidates who have completed or are in the final year of their full-time Diploma course in Electrical/Electronics/Mechatronics Engineering 	Engineering;	Full time;	6 months (flexible start date)	2	SGD 600-1000 per month

2	Atomionics	<p>Electronics Engineering Intern</p> <p>Responsibilities</p> <ul style="list-style-type: none"> • Build and Debug electronic systems (data-acquisition systems, electro-mechanical devices, optoelectronics etc.) • Work closely with physicists & engineers to build control systems and embedded software for the atom-interferometry system • Design, manufacture and evaluate electronic circuits 	<p>About you</p> <ul style="list-style-type: none"> • An absolutely driven individual with creative problem solving skills, analytical mind, and persistence, ideally, demonstrated • Able to program and debug in C, C++ or Python, with some experience in programming embedded systems • Well-versed in basic electronics: knowledge of fundamental circuits and their operation • Experience with PCB design (and familiarity with at least one EDA software), assembly and testing of analog, digital and mixed signal circuits <p>Even better if you have</p> <ul style="list-style-type: none"> • Worked in a technical student team, or an early stage company environment • Worked on personal hobby projects (and can brag about them!) • We don't care for degrees, but if you have studied Electrical/Computer/Mechatronics/Systems Engineering, or a related field, that'll be delightful. Also open to candidates who have completed or are in the final year of their full-time Diploma course in Electrical/Electronics/Mechatronics Engineering 	Engineering;	Full time;	6 months (flexible start date)	2	SGD 600-1000 per month
---	------------	---	---	--------------	------------	--------------------------------	---	------------------------

3	Atomionics	<p>Mechanical Engineering Intern</p> <p>Responsibilities</p> <ul style="list-style-type: none"> • Work in collaboration with electronics and atomic physicists to develop the system architecture to ensure robustness and reliability in a dynamic environment of Atom Interferometry sensing systems • Design the housing and packaging for miniaturized atom-interferometry setup • CAD models for precision manufacturing and fabrication of optomechanical benches • Structural analysis and characterization to ensure robustness in harsh environment 	<p>About you</p> <ul style="list-style-type: none"> • An absolutely driven individual with creative problem solving skills, analytical mind, and persistence, ideally, demonstrated • Experience using Solidworks/Autodesk/other CAD software • Experience in different manufacturing techniques <p>Even better if you have</p> <ul style="list-style-type: none"> • Worked in a technical student team, or an early stage company environment • Worked on personal hobby projects (and can brag about them!) • We don't care for degrees, but if you have studied Mechanical/Mechatronics/Aerospace, or a related field, that'll be delightful. Also open to candidates who have completed or are in the final year of their full-time Diploma course in Electrical/ Electronics/Mechatronics Engineering 	Engineering;	Full time;	6 months (flexible start date)	2	SGD 600-1000 per month
4	Atomionics	<p>Physics Intern</p> <p>Responsibilities</p> <ul style="list-style-type: none"> • Support the physics and optics team to conduct experiments on the Atom Interferometry setup • Characterization of the Atom Interferometer • Support the design and development of autonomous laser frequency stabilization 	<p>About you</p> <ul style="list-style-type: none"> • Pursuing a Bachelor's or Master's or PhD in Physics, with theoretical understanding in Cold Atom Physics • Prior experience in Python • Ability to work independently and in a team <p>Even better if you have</p> <ul style="list-style-type: none"> • Proficiency in experimental work in optics • Prior experience in quantum metrology lab • Built laser systems and spectroscopy setups • Experience in theoretical simulation of atomic systems 	Science;	Full time;	6 months (flexible start date)	1	SGD 600-1000 per month

5	Atomionics	<p>Software Engineering Intern</p> <p>Responsibilities</p> <ul style="list-style-type: none"> ● Work on hardware-software interaction and visualization of data ● Develop software to interface with FPGA hardware used for precision timing control and data acquisition 	<p>About you</p> <ul style="list-style-type: none"> ● An absolutely driven individual with creative problem solving skills, analytical mind, and persistence, ideally demonstrated ● Able to program and debug in Python, with some experience in programming embedded systems (experience with Qt is an advantage) ● Well-versed in basic electronics: knowledge of fundamental circuits and their operation ● Have an understanding of software as well as hardware architecture ● Can pick up new software <p>Even better if you have</p> <ul style="list-style-type: none"> ● Worked in a technical student team, or an early stage company environment ● Worked on personal hobby projects (and can brag about them!) ● We don't care for degrees, but if you have studied Computer/Electronics/Software Engineering, or a related field, that'll be delightful. Also open to candidates who have completed or are in the final year of their full-time Diploma course in Computer/Electronics/Software Engineering ● Experience in scripting/software experience with embedded systems and understanding of FPGAs 	Computing;	Full time;	6 months (flexible start date)	2	SGD 600-1000 per month
---	------------	---	--	------------	------------	--------------------------------	---	------------------------

6	HiCura Medical Pte Ltd	<p>HiCura Medical is a med-tech company that builds intelligent solutions for image-guided procedures. Our first product, uSINE, improves spinal anaesthesia and epidural in obstetrics and other surgical procedures by using machine-learning algorithms to identify spinal landmarks in real-time during a live ultrasound scan. With accurate identification results, uSINE is able to guide clinicians to find the correct spot and angle for needle insertion, improves the procedure efficiency and success rate, and enhances patients safety.</p> <p>The intern would work closely with the team on the iteration of uSINE. Specifically, it includes</p> <ul style="list-style-type: none"> - Research and design of image processing algorithms and machine learning models - Software development and testing - Algorithm benchmarking and troubleshooting <p>Through this internship, the intern would gain knowledge of</p> <ul style="list-style-type: none"> - Medical image processing and machine learning techniques - Software verification and testing processes - Medical device regulations and standards - Holistic view of real-life software projects - Good coding skills and practices 	<p>Essential Skills</p> <ul style="list-style-type: none"> - Proficiency with Python - Good knowledge of computer vision and machine learning basics <p>Preferred Skills</p> <ul style="list-style-type: none"> - C++ - Research experience on object detection/tracking projects - Work experience on medical device development 	Computing;Engineering;	Full time;	1st Mar. 2021 - 31st Aug. 2021 (6 months)	1	SG\$1,200 per month
7	Builders 265 Pte Ltd	<p>BIM Executive</p> <p>Job Scope</p> <ul style="list-style-type: none"> •Prepare 2D & 3D presentation/design drawings. •Develop BIM models for specific design discipline. •Perform model checks and identify issues for discrepancies. •Collaborate with other disciplines on design, submission, and implementation of BIM in the entire construction process. •Ensure the integrity and quality of models. 	<ul style="list-style-type: none"> •Deg / Dip in Engineering (Mechanical, Electrical, Civil, Structural, Electronics) •Deg / Dip in Architecture, Green Building, Construction Management, Facilities Management, Intelligent Building Technology, and other Built Environment-related fields •Interest and passion in Architectural, Engineering and Construction industry •Candidates without prior experience are welcome 	Design & Environment;Engineering;	Full time;	1 year	5-10	2400-2800

8	Staple AI Pte Ltd	<p>AI and Computer Vision intern</p> <p>About Staple: Staple is a Singapore based AI company with subsidiaries in Vietnam and Indonesia. Staple is helping to build the future of work by developing technology to interpret, extract, process and reconcile data workflows across structured, semi-structured and unstructured sources. Staple's first product interprets and extracts data from documents, and then matches this data between sources, without the need for templates. This requires intelligent software, capable of understanding documents. Since incorporating in 2018, Staple has been backed by Entrepreneur First (joinef.com), and 500 Startups (500.co), and has won awards and recognition from Ernst and Young, Accenture and Enterprise Singapore to name a few. Our customers represent some of the largest multinationals in Singapore, and some of the largest financial institutions worldwide. As our client base grows, we are looking to onboard more talented engineers to join our elite team.</p> <p>Description Machine Learning (ML) sits at the core of our efforts to automate the future work. We turn ML lab experiments into enterprise-ready AI solutions to solve complex machine perception and natural language understanding problems.</p>	<p>Responsibilities</p> <ul style="list-style-type: none"> ● Apply the latest, cutting-edge advancements in AI/ML research to create technologies for automating business processes from end-to-end. ● Work closely with the application engineering teams to integrate state-of-the-art algorithms and model research. ● Owning ML models end-to-end, from collecting training data to deploying in production, and overseeing the quality and ongoing evaluation of models. ● Collaborate with other engineers to build tools for accelerating ML research internally. ● Following AI/ML research and apply it to create technologies for automating cumbersome business work like data entry ● Bringing algorithms and models research into practice ● Working closely with the application teams to successfully integrate models into our product <p>Qualifications and Experience:</p> <ul style="list-style-type: none"> ● Solid understanding of Mathematics and CS fundamentals, with demonstrated ability to write high-quality code ● Strong analytical skills ● Experience with one or more general purpose languages (preferably Python3, but Java, C/C++, Perl also are great) and Git ● Practical experience in modern ML technologies and 	Computing;Engineering;Science;	Full time;	2-6 Months (flexible)	1-2	1-2k (depending on experience). PhD students may be higher.

15	Curium Pte. Ltd.	<p>Software Engineer - Robotics and Autonomous Vehicles</p> <p>Our team is looking for highly motivated and passionate Software engineers in Robotics and AV domains to develop and bring innovative technologies to the world. You will be involved in developing and testing algorithms and software for processing and analyzing sensor data, packaging and deploying them to both on-edge and in cloud environments. You will be responsible for developing and maintaining the overall architecture of the Curium platform. You will work with multi-functional team with diverse skill sets to bring the product in an agile fashion targeting rapid deadlines and will directly report to the CTO. You'll find the work exciting and challenging trying to constantly push you beyond your boundaries.</p> <p>Curium is a deep-tech start-up which is a catalyst for the successful adoption of Autonomous Vehicles. We are at the heart of all Autonomous Vehicles enabling a safer, efficient transportation environment for all.</p> <p>Are you interested in leapfrogging your career into the hottest tech sectors of the decade?</p> <p>Are you interested in working with the industry leaders of smart vehicles?</p> <p>We are working with leading European and Asian automotive players that will give you great exposure and visibility in the industry.</p>	<p>Roles and Responsibilities:</p> <p>Design, develop, test and deploy automotive-grade production software and infrastructure for various driving platform that involves RADAR, LiDAR, Camera and other sensors.</p> <p>Processing sensor data by building or applying tools.</p> <p>Design, build, and innovate in various areas such as computer vision, lidar, radar, and other sensor data processing with an emphasize on high-performance machine learning and real-time/near-real-time inference.</p> <p>CI/CD of the pipelines.</p> <p>Working in diverse compute environments local, cloud environments such as AWS/Google co-lab/Azure and also in embedded systems using Hypervisor, Linux, Windows and containers.</p> <p>Requirements:</p> <p>BS/MS/PhD in CS/CE/EE or equivalent experience</p> <p>3+ years of experience in a related field</p> <p>Proficiency in Python and experience in C/C++ programming</p> <p>Knowledge and experience working with Docker, Kubernetes, GIT, ROS, ROS2, OpenCV, PyTorch.</p>	Computing;Engineering;	Full time;Part time ;	1 March 2021 (Flexible. Duration 3-6 months	3	Monthly: \$800 (undergraduate), \$1000 (Masters), \$1500 (PhD)
----	------------------	--	--	------------------------	-----------------------	---	---	--

16	Curium Pte Ltd	<p>Sensor Fusion Engineer</p> <p>We are looking for a highly-motivated Sensor Fusion Engineer to perform research and development of sensor fusion software and algorithms for semi- and fully autonomous vehicles. The engineer will be responsible for development, implementing and maintaining the pipelines for processing and analysis of multimodal sensor data, and deploying an edge-computing architecture. The responsibilities include working with large datasets, create and curate testbeds and quantify results to continuously improve performance. Prior experience in navigation robots and/or autonomous systems is a plus.</p> <p>You will report directly to the CTO and work towards developing infrastructure design and development, documentation and maintenance of software designed to work with complex sensor technologies such as LIDAR, RADAR and Vision Sensors.</p> <p>Industry</p> <p>Automotive IoT Artificial Intelligence Machine Learning</p> <p>Who We are: Curium is a deeptech startup which is a catalyst for the successful adoption of Autonomous Vehicles. We are at</p>	<p>The Role Responsibilities</p> <p>Work in a team to deliver a technology-based project using Artificial Intelligence, Machine Learning and Vision Systems.</p> <p>People and Talent</p> <p>Demonstrate technical competency and independent solution thinking</p> <p>Work well in a diverse team of hardware and software developers.</p> <p>Promote innovation</p> <p>Work independently and as part of a team</p> <p>Demonstrate exceptional communication and interpersonal skills</p> <p>Technical Skills:</p> <p>The candidate should have experience in:</p> <p>Understanding of vision sensors such as cameras, Lidars etc.</p>	Engineering; Computing;	Part time ;Full time;	Flexible (March 1st), 3-6 months duration	3	Monthly: Undergraduate (\$800), Masters (\$1,000), PhD (\$1,500)
